Course, Year & Section: BSIS 2-B

Subject: WEB SYSTEM

Professor: Mr. RED GUILLERMO

REFLECTION

WEEK #5

In Week 5, I learned how to use JavaScript functions and Bootstrap to create webpages that are more organized and responsive. One challenge I faced was understanding how Bootstrap classes work and how they affect the layout of the page. At first, I was confused about which classes to use, but I learned by trying different options and checking how they looked in the browser. As I practiced, I became more confident in using Bootstrap components and designing pages that work well on different screen sizes.

I also made some improvements to my webpage. I added a dismissible announcement alert so users can easily see important information and close it when they no longer need it. I also added another box to the Services section to make the layout look more balanced and complete. These changes made the webpage look cleaner and more user-friendly. Overall, this activity helped me understand the importance of creating websites that are both functional and visually appealing.
