

Name: Mikyla B. Baraquiel

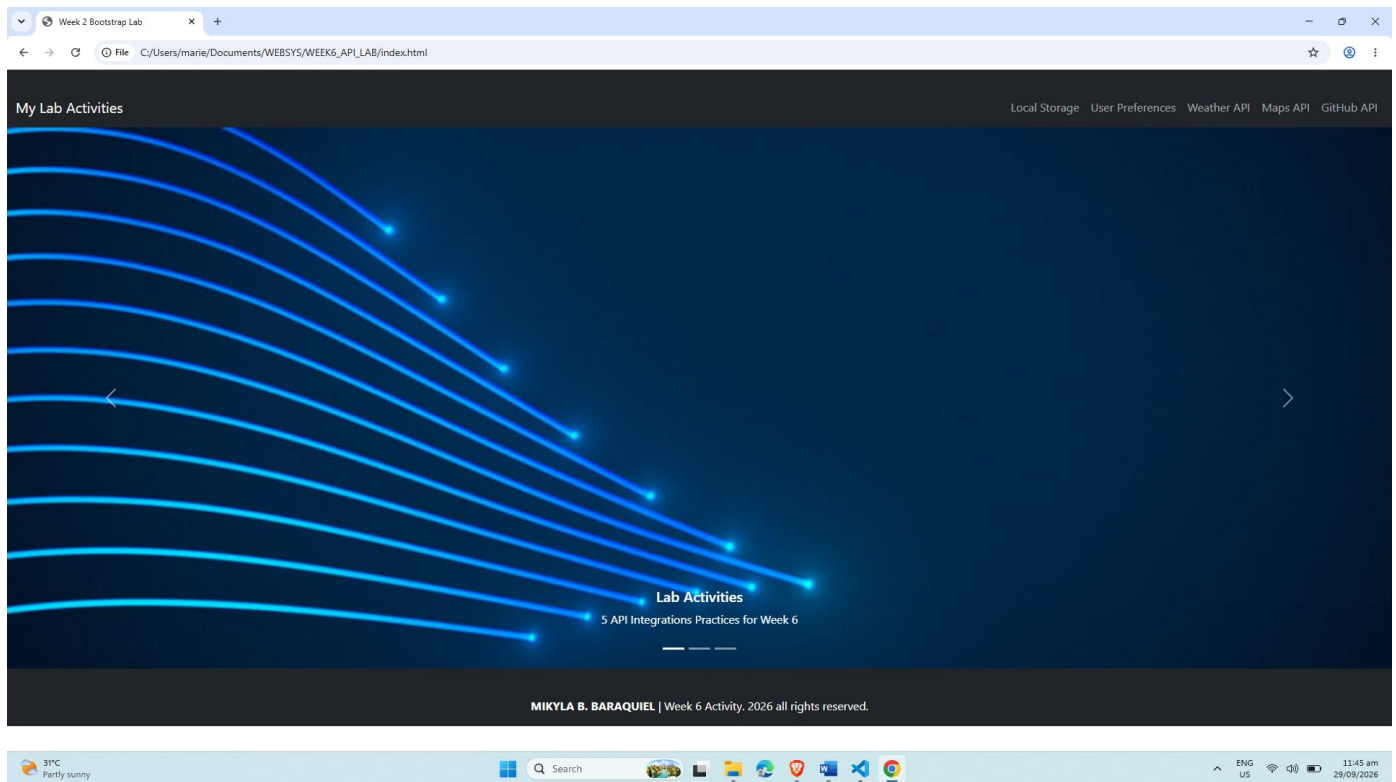

Course, Year & Section: BSIS 2-B

Subject: WEB SYSTEM

Professor: Mr. RED GUILLERMO

REFLECTION

WEEK #6

In **Week 6**, I learned how to use APIs and client-side storage to make a website more interactive and useful. While working on the activity, I faced a few challenges. Sometimes the API data would not display correctly, so I searched for the errors and checked my code until I found the problem. I also had trouble with the navigation bar because the Home link stayed highlighted even when I was on another page. Another issue happened when I clicked the Local Storage page and got an error. I realized that I had accidentally placed the Local Storage code in my Home page, so I created a separate file for it and the feature worked properly. I also spent some time adjusting the carousel interval until it slid smoothly. To improve my webpage, I added a carousel to the Home page, which made it look more attractive and engaging. Overall, this activity helped me become more confident in solving problems and improving both the functionality and design of my website.
