

Name: Mikyla B. Baraquiel

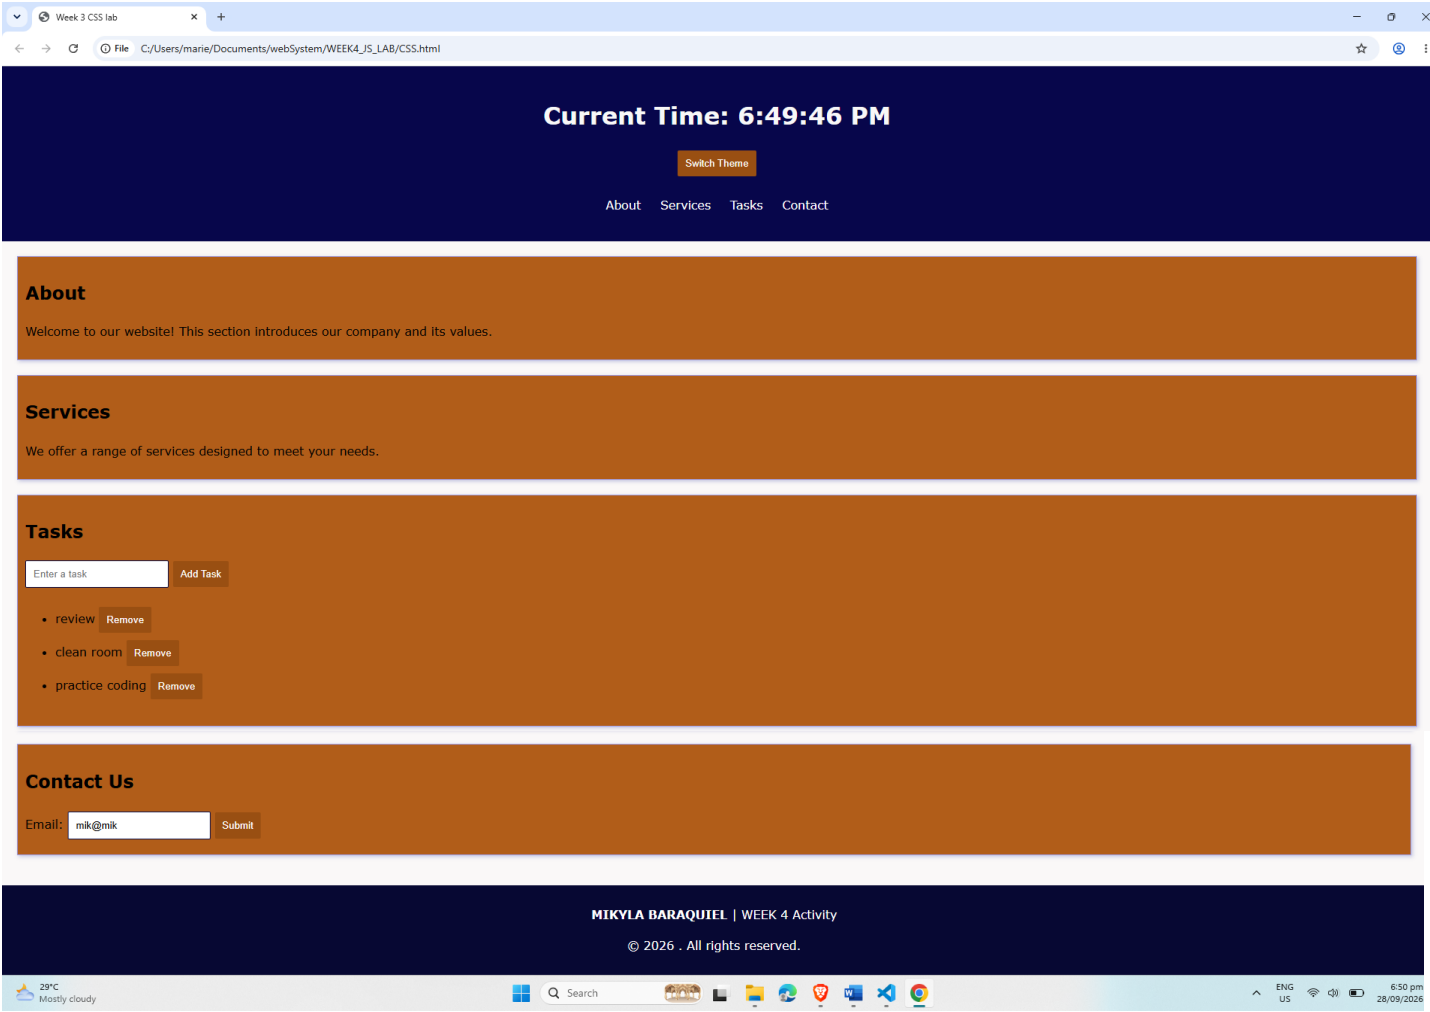

Subject: WEB SYSTEM

Course, Year & Section: BSIS 2-B

Professor: Mr. RED GUILLERMO

REFLECTION

WEEK #4

In **Week 4**, I learned the basics of JavaScript and how it can make a webpage more interactive. At first, I found it challenging to understand how events and DOM manipulation work together because some parts of my code were not working as expected. I spent time checking my code carefully and testing it little by little until I found my mistakes and fixed them. As I worked on the activity, I became more comfortable using JavaScript to respond to user actions. I also decided to improve the layout of my webpage. Instead of keeping the task list at the top of the page, I moved it beside the About and Services sections to make the design look cleaner and more organized. I liked this change because it made the page easier to read and navigate. Overall, this activity helped me improve both my coding skills and my ability to create a more user-friendly webpage.
