

Name: Mikyla B. Baraquiel

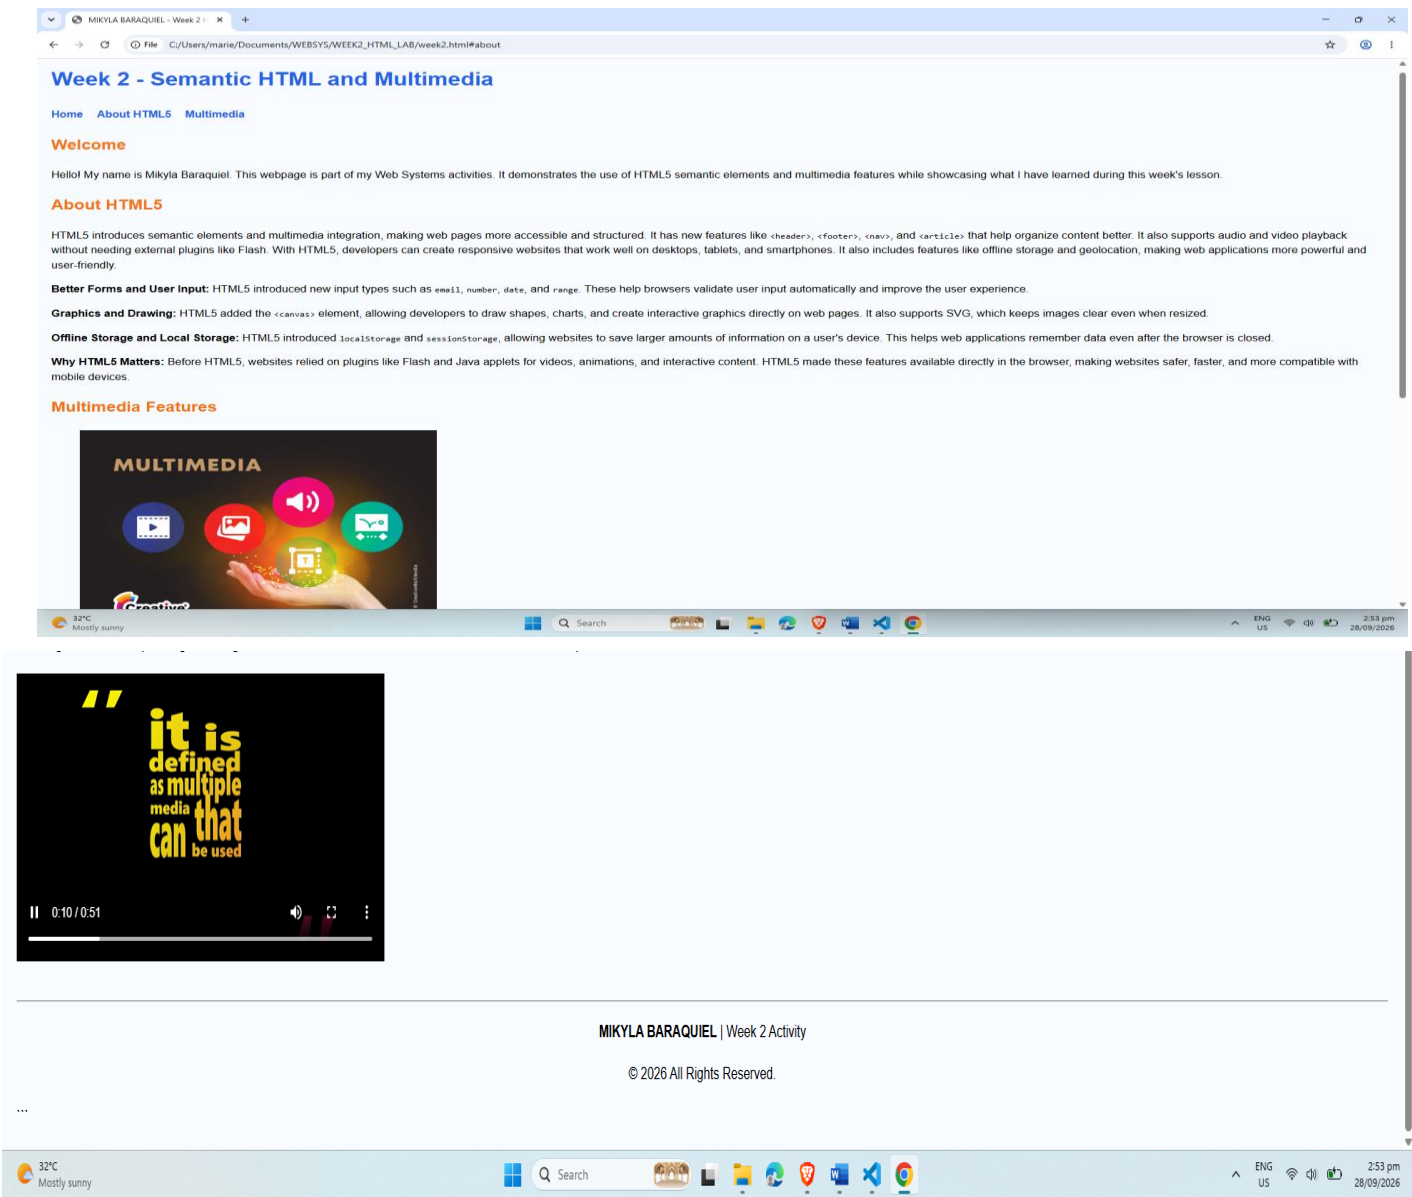

Course, Year & Section: BSIS 2-B

Subject: WEB SYSTEM

Professor: Mr. RED GUILLERMO

REFLECTION

WEEK #2

Week 2 was about learning semantic HTML elements and how to add multimedia content like images and videos to a webpage. One of the challenges I encountered was how to use semantic tags properly and how to structure the content clearly. I did this by looking up what each tag was for and using them in different parts of my web page. I learned through this activity how semantic elements can help organize a website, making it easier to navigate, add images and videos in webpage that it made more user-friendly. I also improved my webpage with a custom design that includes my name, navigation links, a welcome section, and a custom footer and I also added a color which is blue and orange. Overall, this activity helped me understand HTML5 better and to create a more meaningful and a more visually appealing webpage.
